

User Stories	Implemented Function	Pictures		Sucessful /Errors	Problems	Outcomes
As a user, I would like have some basic information on the site, to know how to use it and what its purpose is.	Popup modal on page load and an information button in header to popup modal.			Sucessful	No problem with modal working. Tried to use localStorage and \$.cookie to make limit reload, never got it to work so end up not using it. There are 2 modals with this code. Didn't get any errors in dev tools, but the two didnt work well together due to the 'onclick' function according to research.	Ended up never using localStorage and \$.cookie in start modal. Both modals can be closed by clicking on the 'x', but also any where outside the modal.
As a kitesurfer, I want to be presented with an over view of all spots on the map, to get a sense of how they are distributed over the country.	Creating a variable calling the json file with coordinates, using the inEachFeature to select content for the popup. Used geojson.io to create json file for all kitespots with beach information			Error	Error with selecting and zoom to layer. The popup shows with content but gets cut off in view. Some error with calling labels and keys since I made the json file in geojson.io.	Used an addEventListener to querySelector to load and pan the popup with content in view. Ran tests to the json file, and edit it. Works fine to my knowleged.

As a kitesurfer, I want to be able to search for specific spots by name, to easily find it on the map.	Dropdown list			Successful	Had no problem with this. Just followed the tutorial.	Works fine to my knowledge.
As a kitesurfer, I want to be able to analyze the spots surrounding, to determine if it fits my needs.	Leaflet layer control for different layer options			Successful	Leaflet has another way to show internal maps compared to other map platforms, so once that was figured out there where now problems.	Works fine to my knowleged.

As a kitesurfer, I want to see a scale on maps, to know the proportions of the beach surroundings.	Leaflets scale control			Successful	No problems, except for figuring out the styling since its a Leaflet control	Works fine to my knowledge.
As a kitesurfer, I would like to know of some surfing communities, to check in and get in contact with other surfers.	Button with icon links at the bottom of the page to external sites.			Error	By adding the 'alt' with label name the image link started working	Works fine but feels like its taking too long to load the links. Especially the first one "Surfskolan Crew, but can't find any error.

As a kitesurfer, I would like to know what regions the kitespots are located in, to get a sense of the areas.	Map overlays options regions and cities. Polygon regions with popup names and cities popup with name and pictures.	 		Error	I could fetch the url data to console but not get it to overlays. And the cities didn't popup if polygon layer was on top.	The order of coordinates was 'd.fields.geo_shape', then had to use 'L.GeoJSON.geometryToLayer' to call my data variable. And added a 'bringToFront' function for the citie popups
